Goals

As a Ruby on Rails developer, I have six months of intensive training in programming with emphasis in Ruby on Rails, pair programming and TDD. Additional independent study includes Photoshop, JavaScript, SQL, HTML, CSS, and Web Design. At this early stage in my development career, I want to expand on my immersive learning experience with challenging projects in an organization that promotes further education and giving back to the community.

Projects

MentorMeet

Github repository

Meet mentors. Get help. Give help.

An online application that schedules and facilitates remote pairing between developers of all skill levels and locations.

Tech: Ruby on Rails, PostgreSQL, RSepc, Capybara, OmniAuth

CallBack

Github repository

WIP - An application built for job seekers to practice answering interview questions over the phone. The app utilizes the Twilio API to record answers and allows users to publish recordings for comment by other users.

Tech: Ruby on Rails, PostgreSQL, RSepc, Capybara, Twilio

Education

gSchool @ Galvanize

Boulder, CO

Full-Stack Ruby on Rails Development, graduated August 2014
